

PIVOT ARM AWNINGS

Pivot Arm Awnings are amongst the most well known sun protection systems and are therefore very popular both in the domestic and commercial sectors.

They shade the window yet allow the air to flow around it which makes them ideal for those hard to reach windows operated via an internal cord lock, winch or motor.

Pivot Arm Awnings are an excellent exterior shade option and one of the most versatile products on the market. Pivot Arm Awnings are also a popular choice for inaccessible and upstairs windows, and are designed to withstand mild to medium winds.

Pivot Arm Awnings can also provide shade over doorways and patios. Pivot Arm Awnings on the slide rail can be locked at various positions. The awning can be fully retracted, extended horizontally (like an overhead canopy), or extended to an almost vertical position.

“ Awnings are an effective way to reduce heat gain and prevent cooling energy loss in households. This benefits the environment by reducing greenhouse gas emissions and the homeowner by saving them money on energy bills. ”
