

## SECURITY SCREENS

Our Security Screen Doors and Security Window Screens are 316 marine grade mesh and have an extra strong aluminium frame combination which exceeds Australian standards, ensuring maximum security for home, office & commercial buildings.

A one way wedging retention system is used to anchor the mesh in place. This system ensures the greater the impact, the tighter the grip on the mesh. The system also helps prevent galvanic corrosion - a chemical reaction that occurs when different metals are in contact with each other, particularly in external conditions or in coastal areas.

Our Security Screens meet the Australian Security Door Standards AS5039 and AS5041 and also comply with the Fire Safety Australian Standard – Compliant to Level BAL – 40. The mesh is non-flammable and fire resistant making them suitable for bushfire prone areas.

“ Security Screens are a cost effective and innovative product that provides the same integrity and strength of a standard door at a more affordable price. The frame fixing is unique and combines a well proven wedge system along with an increased strength. ”
